

The Enhanced

QRADAR

Experience

Security Analytics and Visualization
Platform (SAVP) for IBM QRadar
Security Intelligence Platform

Security First

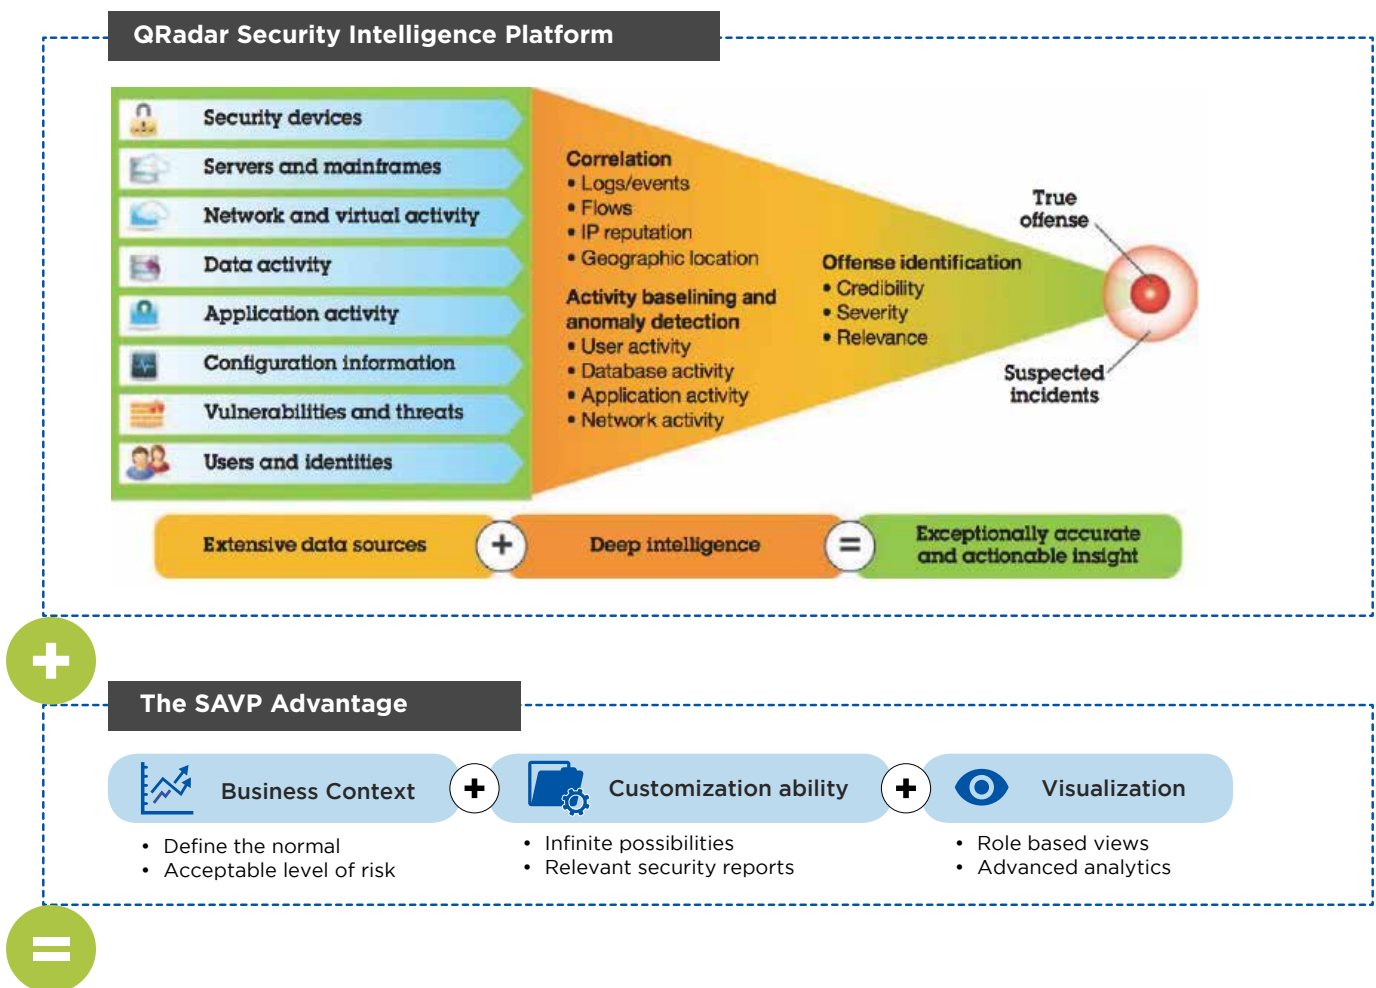

Interconnected and intelligent businesses today are both a gift and a challenge. With increasing data, organizations face greater threats and compliance risks. There is a pressing need to employ advanced analytics for detecting external and internal threats to safeguard businesses against frauds, vulnerabilities, and risks.

IBM QRadar Security Intelligence Platform

IBM QRadar Security Intelligence Platform gives you powerful security armor with real-time correlation and anomaly detection across a distributed and scalable repository of security information. Big data analytics enable more accurate security monitoring and better visibility to improve security posture and automate compliances.

SAVP for QRadar

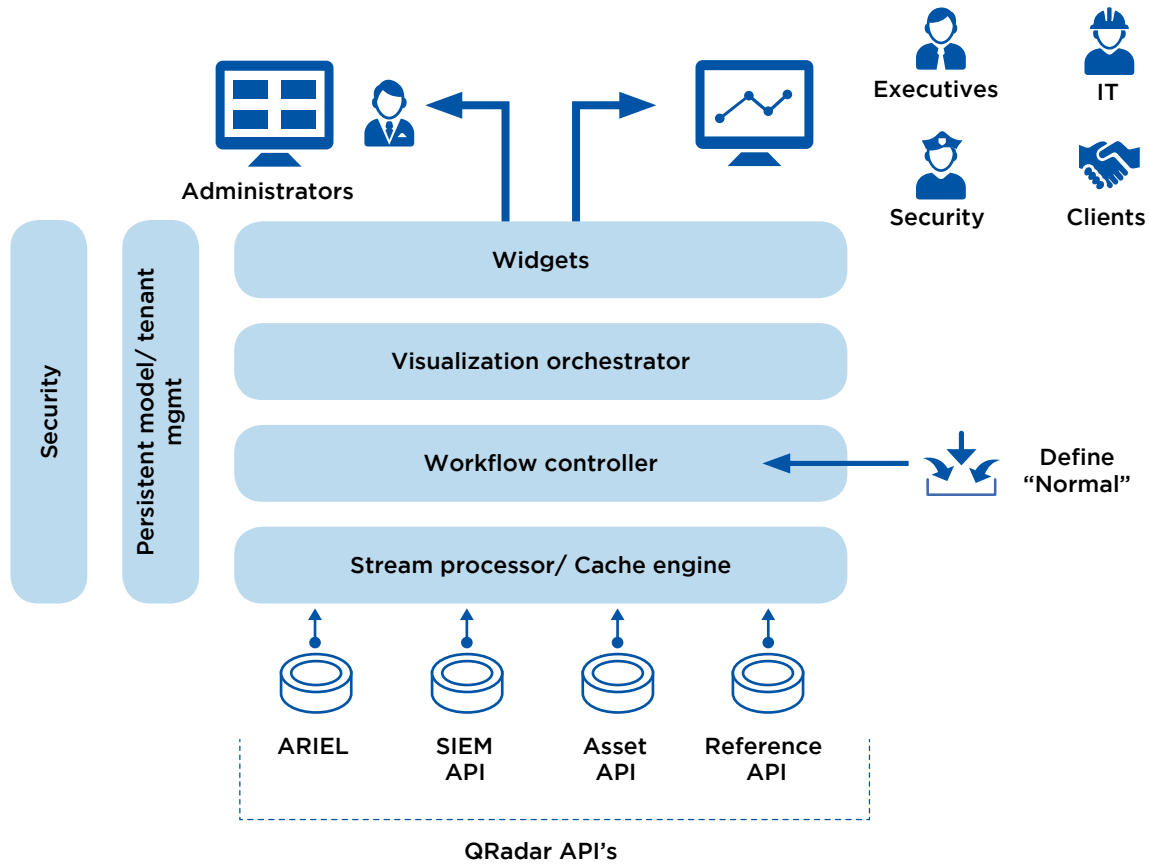

SAVP for QRadar is a value proposition to enhance the experience of QRadar. SAVP for QRadar imparts greater customization and visualization to the QRadar platform, enabling you to analyze your threats more effectively. SAVP for QRadar is a powerful tool that employs advanced analytics to present a clear-cut picture of your state of security.

Enhanced Customer Experience

SAVP for QRadar - Functional Architecture

SAVP for QRadar is capable of picking information from all data sources. It allows you to define your own normal and compare collated information. You can create an unlimited number of widgets for varied and relevant visualization.

SAVP for QRadar advantage

Our domain experience in the Security Industry gives us better understanding of security issues and gaps. We have developed a **flexible platform** so that you can **customize enterprise security** to suit your needs.
